GENERAL INFORMATION:

APPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196.136

CURRENT PAPLICATION NUMBER: US/09/252,991A

CURRENT FILING DATE: 1999-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 16320

Sequence 2940, Application US/09134000C

Patent No. 6617156

GENERAL INFORMATION:

APPLICANT: LYAND DOUGETEE-Stamm et al

APPLICANT: LYAND SOUGETEE ACID AND AMINO ACID SEQUENCES RELATING TO

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO

TITLE OF INVENTION: ENTERCOCCUG FAECALIS FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: NUMBER: US/09/134,000C

CURRENT APPLICATION NUMBER: US/09/134,000C

CURRENT FILING DATE: 1998-08-13

PRIOR FILING DATE: 1997-08-15

NUMBER OF SEQ ID NOS: 6812

NUMBER OF SEQ ID NOS: 6812

SOSTWARE: PATENTH VERSION 3.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ::: |||||||

Sequence 3007, Application US/09621976

Patent No. 663963

GENERAL INFORMATION:

APPLICANT: Dumas Milne Edwards, J.B.

APPLICANT: Jobert, S.

TILE OF INVENTION: ESTS and Encoded Human Proteins.

FILE REFERENCE: GENERT 0.054Pt2.

CURRENT APPLICATION NUMBER: US/09/621,976

CURRENT FILING DATE: 2000-07-21

NUMBER OF SEQ ID NOS: 19335

SOFTWARE: Patent.pm

The present sequence is one of thirty three nucleic acids encoding PRO polypeptides. The PRO polypeptides, anti-PRO antibodies, agonists and antipognists are useful for treating and diagnosing immune related actions such as systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, spondyloarthropathies, systemic sclerosis, didopathic inflammatory myopathies, Signen's systemic vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune thrombocytopaenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central and peripheral nervous systems (such as multiple sclerosis, didopathic demyelinating polyneuropathy or Guillain-Barre syndrome, and chronic inflammatory demyelinating polyneuropathy), hepatobiliary diseases (such as infectious, autoimmune chronic active hepatitis, primary bilary cirrhosis, granulomatous hepatitis and sclerosing cholangitis), inflammatory bowel disease, gluten-sensitive enteropathy and Whipple's inflammatory bowel disease, gluten-sensitive enteropathy and Whipple's skin diseases such as asthma, allergic rhinitis, atopic dermatitis, skin diseases such as asthma, allergic rhinitis, atopic dermatitis, cod hypersensitivity and urticaria, idiopathic pulmonary fibrosis and inclusing contact sensitivity in as each of immunely associated diseases of the lung such as eosinophilic pneumonias, idiopathic pulmonary fibrosis and inclusing contact sensitivity and urticaria, idiopated diseases such as asthma, allergic pulmonary fibrosis and chinical as collaborates.
                                                                                                                                                                                                                                                                                           Thirty three nucleic acids encoding PRO polypeptides which are useful in the diagnosis and treatment of immune related disorders, e.g. systemic lupus erythematosis, rheumatoid arthritis, osteoarthritis, thyroiditis

Membrane-bound proteins and related nucleotide sequences

Claim 2; Fig 271; 822pp; English.

The invention provides membrane-bound PRO polypeptides and polynucleotides encoding them. The PRO sequences of the invention were identified based on extracellular domain homology screening. The PRO sequences have homology with proteins including LDL receptors. TIE ligands and various enzymes. The membrane-bound proteins and receptor molecules are useful as plarmaceutical and diagnostic agents. Receptor immunoadhesins, for instance, can be used as therapeutic agents to block receptor-ligand interactions. The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interaction. The PRO encoding sequences are useful as hybridization probes, in chromosome and gene mapping and in the generation of antisense RNA and DNA. PRO nucleic acid sequences will also be useful for the preparation of PRO polypeptides, especially by recombinant techniques

Sequence 713 BP; 262 A; 105 C; 134 G; 212 T; 0 U; 0 Other;

The present invention describes sixty four human PRO proteins which can be used in the treatment of immune related diseases. The human PRO be used in the treatment of immune related diseases. The human PRO proteins, anti-PRO antibodies, agoniets and antagonists are useful for treating and disquosing immune related disorders. The disorders are selected from systemic lupus erythematosus, rhenmatod arthritis, selected from systemic lupus erythemators when arthritis, spondyloarthropathies, costeoarthritis, juvenile chronic arthritis spondyloarthropathies, systemic sclerosis, idiopethic inflammatory myopathies, Sjogran's systemic vasculitis, sarcoidosis, autoimmune hemolytic syndrome, systemic vasculitis, sarcoidosis, autoimmune hemolytic syndrome, systemic hemolocytopaenia, thyroiditis, diabetes mellitus, limmune-mediated ranal disease, demyelinating diseases inflammatory bowel disease, gluten-sensitive enteropathy and Whipple's disease, autoimmune cor immune-mediated skin diseases, allergic diseases, immunological cor immune-mediated skin diseases, allergic diseases, immunological cor immune and graft-versus-host-disease. AAS21244-AAS21518 encode for novel human secretory and transmembrane PRO polypeptides. The PRO polypeptides are useful to detect other PRO polypeptides, to link bloactive molecules to cells expressing PRO polypeptides, to madulate biological activities of cells expressing PRO comparate, to madulate biological activities of cells expressing PRO breast, prostate, rectal, cervical activities of cells expressing PRO breast, prostate, rectal, cervical or liver tumours by comparing PRO copypeptide expression in a cell sample to that in a control sample. Some of the 275 sequences are also useful to stimulate the release of tumour of fiferentiation of chondrocytes, the proliferation or agene expression in differentiation of chondrocytes, the proliferation of proliferation of inner ear utricular supporting cells or of Tromporties, the release of a cytokine from peripheral blood monocytes (PBMCs), or the proliferation of endothelial cells. Some of the PRO polypeptides may modulate glucose or free fatty acid uptake by skeletal colls or by adipocytes; or inhibit binding of A-peptide to factor viral, the PRO polypeptides can be used in assays to identify molecules involved in binding interactions. The polymucleotides encoding PRO polypeptides can be used in assays to identify molecules involved in binding interactions. The polymucleotides encoding PRO polypeptides can be used in assays to identify molecules involved in binding interactions. The proloning interactions. The PRO proteins have cytostatic activity. The PRO proteins can be used for targeted delivery of bloactive molecules, such as toxins, radiolabels or antibodies, that cause cell death. PRO nucleotide sequences, and their fragments, can be used as hybridisation probes, in chromosomal and gene mapping, and in the generation of anti-sense RNA and DNA. They may also be used to produce transgenic animals which are used to develop and screen therapeutically useful reagents. The PRO nucleotide and protein sequence can be used for tissue typing and in treating

Novel isolated PRO polypeptides e.g., PRO826, PRO1068, PRO1184, PRO1346 and PRO1375, which stimulate proliferation of stimulated T-lymphocytes are therapeutically useful for enhancing immune response and in cancer

Claim 2; Fig 273; 648pp; English.

The invention describes an isolated human PRO polypeptide. The PRO polypeptides are useful in detecting PRO polypeptides in a sample, in linking a bioactive molecule to a cell expressing a PRO polypeptide, and in modulating at least one biological activity of a cell expressing a PRO polypeptide. PRO1312 stimulates hypertrophy of neonatal heart and is thus collypeptide. PRO1312 stimulates hypertrophy of neonatal heart and is thus useful for treating cardiac insufficiency disorders. PRO1154 and PRO1186 or PRO943, PRO926, PRO1066 or PRO535, PRO626, PRO819, PRO1136, and PRO1367 induce c-fos in endothelial growth, and PRO136, cuseful for treating conditions or disorders where angiogenesis would be beneficial, e.g. wound healing and antagonist of this polypeptide are useful for treating cancerous tumours. PRO812 inhibits vascular calculated T-lymphocytes and art ethnis polypeptide are cells and is thus useful for inhibiting endothelial cell growth in mannals which would be beneficial in inhibiting tumour growth. PRO826, PRO1068, PRO1184, PRO1346 and PRO1375 stimulate proliferation of stimulated T-lymphocytes and are therapeutically useful for enhancing cimmune response. PRO826, PRO132 is also enhances survival/proliferation of immune response. PRO826, PRO132 is also enhances survival/proliferation of individual coll growth in the coll production of individual colls and therefore are useful for treating retainal colls and therefore are useful for treating retainal colls and processes are useful for treating retainal colls and processes are useful for mannals processed to the processes and are therefore are useful for treating retainal colls and therefore are useful for treating retainal colls and processes and are therefore are useful for treating retainal colls and processes are useful for treating retainal colls and processes and therefore are useful for treating processes and colls and colls. disorders of injuries, e.g. retinitis pigmentosum, AMD. PRO819, PRO813 and PRO11066 induce proliferation of mammalian Kidney mesangial cells, and therefore are useful for treating kidney disorders associated with decreased mesangial cell function such as Berger disease or other nephropathies associated with dermatitis, herpetiformis or Crohn's disease. PRO1310, PRO844, PRO1312, PRO1192 and PRO1387 induce the

Filvaroff E, Gao W; Deforge L, Desnoyers L, Filvaroff E, G: A, Godowski PJ, Gurney AL, Sherwood S; Tumas D, Watanabe CK, Wood WI, Zhang Z; New secreted and transmembrane PRO nucleic acids, for treating inflammation, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, axquired immunodeficiency syndrome (AIDS), or cancer.

Claim 2; Fig 473; 660pp; English.

The invention describes an isolated nucleic acid (I) comprising, or which has 80 % sequence identity to, or the full-length coding sequence of, one of 275 nucleotide sequences, and which encodes a corresponding or polypeptide selected from 275 amino acid sequences, where all sequences are given in the specification. The polypeptide encoded by (I) is used to detect PRO polypeptide, laborative molecule to a cell expressing a propertied, modulate a biological activity of a cell, stimulate the PRO polypeptide, modulate a biological activity of a cell, stimulate the crease of tumour necrosis factor (TNF)-alpha from human blood, modulate the uptoliferation or differentiation of cells, stimulate the release of proteoglycans, stimulate the release of cytokine to proliferation or differentiation of cells or gene expression, the proliferation of differentiation of cells, shimilate the release of cytokine computed mononuclear cells, inhibit the binding of A-peptide cofficed and polypeptide encoded by it, are useful for treating inflammatory diseases, organ failure, atherosclerosis, cardiac injury, infertility, diseases, organ failure, atherosclerosis, cardiac injury, infertility, diseation probes, in chromosome and gene mapping, and in generating complisers RNA or DNA. The polypeptides are useful as pharmaceuticals, antisense RNA or DNA. The polypeptides are useful in tissue typing. This sequence encodes a novel human secreted and transmembrane PNO

Sequence 713 BP; 262 A; 105 C; 134 G; 212 T; 0 U; 0 Other;

The invention discloses isolated PRO secreted/transmembrane polypeptides comprising a sequence without signal peptide and the nucleic acid conding them. The polypeptides can be used to raise antibodies that encoding them. The polypeptides can be used to raise antibodies that compenied to a cell expressing a PRO protein and for modulating at least concloude to a cell expressing a PRO protein and for modulating at least concloudes are also useful in gene therapy, in chromosome. The PRO plypeptides or in generating probes. The PRO polypeptides are useful as molecular markers for protein electrophoresis, collypeptides are useful as molecular markers for protein electrophoresis, and the isolated nucleic acids may be used for recombinantly expressing and the isolated nucleic acids may be used for recombinantly expressing concluse typing. Anti-PRO antibodies are useful in diagnostic assays for tissue typing. Anti-PRO antibodies are useful in diagnostic assays for those markers. The Sequences presented in ABX90083-ABX90468 are the natural sources. The sequence in ABX90083-ABX90468 are the polymucleotides of the invention. Note: The sequence data for this patent constitution of the probes detecting the PRO polymucleotides of the invention. Note: The sequence data for this patent constitution of the probes detecting the PRO sequence. The RDA probes detecting the PRO sequence. The sequence of the invention.

The present invention relates to the isolation of novel human PRO
polypeptides, and the polynucleotide sequences encoding them. The PRO
polypeptides are secreted and transmembrane proteins. The PRO
polypeptides are secreted and transmembrane proteins. The PRO
polypeptides are useful for detecting other PRO polypeptides, for linking
biological activities of cells expressing PRO polypeptides, and for in
closedical activities of cells expressing PRO polypeptides, and for for
closedical activities of cells expressing PRO polypeptides, and for for
closeding PRO polypeptides are useful as hybridisation probes, in
chromosome and gene mapping, in the generation of antisense RNA and DNA,
in the preparation of PRO polypeptide, for generating transgenic animals
or knockout animals, to construct hybridisation probes for mapping the
created an encodes the PRO polypeptide, and for generic analysis of
individuals with genetic disorders, in gene therapy, for chromosome
identification, as chromosome markers, and for generating probes for PCR,
Northern analysis, Southern analysis and Western analysis. The present
sequence encodes a human PRO polypeptide of the invention. Note: The
sequence data for this patent was obtained in electronic format directly
from the USPTO web site at seqdata.uspto.gov/psipsDIDEntry.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel secreted and transmembrane polypeptide for modulating biological activity of cell expressing the polypeptide, identifying agonists or antagonists of polypeptide, and as molecular weight markers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 2; Fig 271; 649pp; English.
